

La piattaforma del gruppo Springer presenta circa 1600 riviste scientifico/accademiche, e una vasta collezione di e-book.

Il contratto del Politecnico prevede l'accesso ai tutti **journals** a partire dal fascicolo di gennaio 1995, con esclusione dei titoli acquisiti da altri editori dopo questa data.

Non è previsto l'accesso agli e-book e reference-works.

Il servizio di **accesso remoto** per gli utenti del Politecnico di Bari è attivabile all'atto della registrazione (user ID uguale all'indirizzo mail istituzionale): consente l'accesso ai full-text da rete esterna.

# Homepage SpringerLink

Maschera di ricerca semplice e *browse* delle risorse

The screenshot shows the SpringerLink homepage with several key features highlighted by red boxes and arrows:

- Registration and login:** A red box labeled "Registrazione, log in per accedere ai full-text da rete esterna" points to the "Sign up / Log in" link in the top right navigation bar.
- Advanced search:** A red box labeled "Accesso alla ricerca avanzata" points to the search bar and the gear icon for search settings.
- Discipline selection:** A red box labeled "Selezione per disciplina e per tipologia" points to the "Browse by discipline" menu on the left side of the page.

The main content area includes a search bar, a "Home • Contact Us" link, and a large banner for "Providing researchers with access to millions of scientific documents from journals, books, series, protocols and reference works." Below this banner are featured journals and books. A sidebar on the right promotes the "Author Academy" with the text "Visit the Springer Author Academy" and the Springer logo.

## Journal of Materials Science

ISSN: 0022-2461 (Print) 1573-4803 (Online)

### Description

The Journal of Materials Science publishes reviews, full-length papers, and short Communications recording original research results on, or techniques for studying the relationship between structure, properties, and uses of materials. The subjects are seen from international and interdisciplinary perspectives covering areas including metals, ceramics, glasses, polymers, electrical materials, composite materials, fibers, nanos ...
